

Yiming Che

(607)-338-8871 — yche1@binghamton.edu — 136 Jensen Road, F34, Vestal, NY 13850

EDUCATION BACKGROUND

- **Binghamton University, State University of New York**
Department of Systems Science and Industrial Engineering
PhD. in Systems Science and Industrial Engineering Expected Aug 2022
advisor: Dr. Changqing Cheng
- **Binghamton University, State University of New York**
Department of Systems Science and Industrial Engineering
Master of Science in Industrial and Systems Engineering May 2018
advisor: Dr. Changqing Cheng
- **Capital University of Economics and Business (CUEB), Beijing, China**
Department of Industrial Engineering
Bachelor of Science in Industrial Engineering July 2017

PROFESSIONAL EXPERIENCE

- **Research Assistant at Binghamton University** 2019-Present
 1. **Deep Learning (current research)**
 - Working on self-supervised learning with special focus on efficient training, e.g., combination of self-supervised learning and active learning or self-paced learning
 - Working on Gaussian process in deep learning to combine Gaussian process and neural networks for relatively small-scale dataset
 2. **Surrogate Modeling and Active Learning/Sequential Design**
 - Developed a novel surrogate model which combines generalized polynomial chaos and stochastic kriging model for efficient surrogate modeling of stochastic systems
 - Significantly reduced computational budget compared to Monte Carlo simulation
 - Achieved high accuracy with small computational budget
 - Developed a new expected improvement-based sampling algorithm with Gaussian process for active learning/sequential design
 - Reduced size of training set by around 90%
 - Achieved high accuracy when only a small fraction of training set is used
 - Developed a K-center-based sampling algorithm with relevant vector machine for active learning/sequential design
 - Significantly reduced required training data to achieve high accuracy
 - Developed a batch-sampling strategy for efficient contour estimation
 - Significantly reduced required training data to achieve high accuracy
 - Significantly reduced training time
 - Outperform the state-of-the-art method in several cases
 3. **Uncertainty Quantification**
 - Developed framework for generalized polynomial chaos expansion for uncertainty quantification of stability of chaotic systems with discrete delays
 - Reduced computational budget of time-domain simulations for uncertainty quantification
 - Devised maximum entropy method for density estimation

AWARD & HONOR

- INFORMS Bonder Foundation Award 2021
- Finalist, IISE-DAIS Mobile App Competition at 2021 IISE Annual Conference and Expo 2021
- Binghamton University Graduate Student Excellence Award in Research (top 1%) 2021
- Travel Grant of Midwest Dynamical Systems Conference 2019 at University of Illinois at Chicago 2019
- Second Place, Best Student Paper Competition at 2019 IISE Annual Conference and Expo (Healthcare track) 2019
- Honorable Mention, Binghamton University Research Day Poster Competition, 2018 2018
- National Scholarship at CUEB 2015
- Scholarship for Academic Excellent Performance at CUEB 2014
- Scholarship for Academic Excellent Performance at CUEB 2013

PROFESSIONAL SKILLS & KNOWLEDGE

- **Programming Languages:** Python, Matlab, R
- **Tools:** Pytorch/Tensorflow, Pandas, Numpy, Jupyter, Linux
- **Machine Learning/Deep Learning:** Deep Neural Networks, Convolutional Neural Networks, Recurrent Neural Networks, Transformer, Bayesian Model, (e.g., Gaussian Process, Bayesian Neural Networks, Variational Autoencoder), XGBOOST, K-means, K-nearest neighbor, Support Vector Machine, Self-supervised Learning, Active Learning
- **Certificate:** Lean Six Sigma Green Belt
